

AMERICAN ANGLE  
ORTHODONTICS

*Art*  
OF THE DETAIL

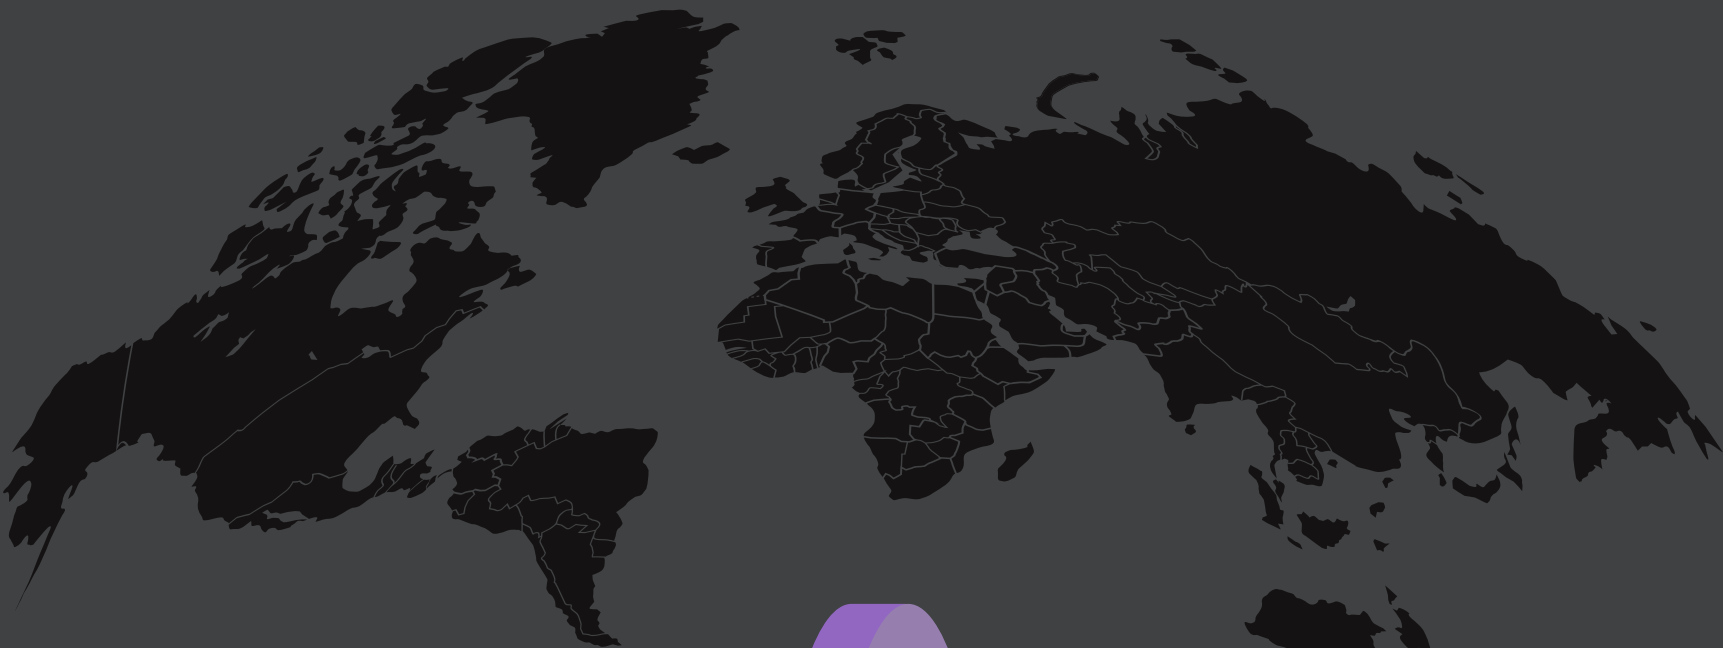

**DEAR ESTEEMED DOCTORS & COLLEAGUES,**

It is with a deep sense of gratitude and appreciation that the entire team at American Angle Orthodontics extends a heartfelt welcome and thank you to every one of you, our valued customers.

We are profoundly aware that our progress and success are inextricably linked to the continuous support and satisfaction of our esteemed clients.

Our steadfast commitment to upholding the highest standards of excellence is guided by our unwavering vision for growth and dedication to delivering innovative products and services that surpass expectations.

With your unwavering backing, we have experienced a remarkable journey of growth and expansion. Since the introduction of our successful product, the Angle Series Buccal Tubes, we have been privileged to serve over 5 million satisfied customers worldwide.

**25+**

**Years of Orthodontic Excellence**  
**Our founders bring over 25 years**  
**of expertise in delivering excep-**  
**tional orthodontic solutions.**

In our latest catalog, you will discover a wide array of new products meticulously crafted and inspired by the invaluable insights and inputs of leading clinicians, educators, and distinguished institutions from across the globe. Together, we are committed to a shared pursuit of innovation, seeking continuous improvement and efficiency, and developing groundbreaking solutions that will elevate our industry and make a positive impact on the world at large.

In the spirit of shared dedication and collaboration, we look forward to the future with great optimism and enthusiasm, as we continue to serve you with the utmost commitment to excellence.

Thank you for being an integral part of the American Angle Orthodontics family.

With warmest regards,  
Team American Angle Orthodontics

# Edward

HARTLEY ANGLE,

Fondly known as the “Father of Modern Orthodontics,” left an indelible mark on the field of dentistry.

Born in Pennsylvania in 1855, Angle’s journey in orthodontics began in the late 19th century.

His passion for discipline led him to study at the Philadelphia Dental College, where he received his dental degree in 1876.

He later attended the Royal College of Surgeons in England to deepen his knowledge and skills.

**ANGLE'S** contributions to orthodontics are profound and far-reaching.

He introduced many concepts and techniques that revolutionized the field.

One of his most significant contributions was the development of the Angle classification system, which categorizes the various types of malocclusions (incorrect bite relationships between the upper and lower teeth).

This classification system is still widely used today.

Angle also invented various orthodontic appliances, such as the ribbon arch, which was a significant advancement in the treatment of malocclusions.

He was also a proponent of the use of radiographs in orthodontic diagnosis and treatment planning, a practice that is now standard in modern orthodontics.

American Angle Orthodontics is proud to take inspiration from Edward Angle's legacy.

We are committed to upholding his spirit of innovation and excellence in our orthodontic products and services.

Our dedication to continuous research and development ensures that we are always at the forefront of orthodontic advancements.

At American Angle Orthodontics, we understand that each patient is unique, and we are committed to providing personalized, high-quality care.

We offer a wide range of innovative orthodontic products, designed to meet the needs of orthodontists and their patients.

As we continue to innovate and develop new products, we remain committed to the principles that Edward Angle espoused: excellence, innovation, and a dedication to improving the lives of patients through orthodontics.

Edward Angle's pioneering spirit lives on in our work, and we are proud to honor his legacy with every product we create.

# COSMETIC BRACKETS

- MONO-CRYSTALLINE CERAMIC BRACKETS
- POLYCRYSTALLINE CERAMIC BRACKETS
- SELF-LIGATING CERAMIC BRACKETS

# COSMETIC BRACKETS

American Angel Orthodontics offers two types of ceramic brackets: monocrySTALLINE and polycrySTALLINE. While both are crafted from ceramic materials, they differ in crystalline structure, which influences their appearance, strength, and other properties.

PROPERTIES	MONOCRYSTALLINE	POLYCRYSTALLINE
<b>MATERIAL</b>	<ul style="list-style-type: none"> <li>Made from a single crystal structure.</li> <li>The material is more uniform, which gives the brackets a clearer, more translucent appearance.</li> <li>Often referred to as "sapphire" brackets because they are made from a single crystal of alumina, similar to sapphire.</li> </ul>	<ul style="list-style-type: none"> <li>Made from multiple crystal structures fused together.</li> <li>The material has a more opaque appearance due to the way light interacts with the multiple crystals.</li> <li>Generally, they have a frosted or slightly off-white look.</li> </ul>
<b>AESTHETICS</b>	<ul style="list-style-type: none"> <li>More aesthetically pleasing because of their transparency.</li> <li>They blend better with the natural color of teeth, making them less noticeable.</li> </ul>	<ul style="list-style-type: none"> <li>Less translucent and more visible on the teeth compared to mono-crystalline brackets.</li> <li>May match the tooth color more closely in some cases, but they are still more noticeable than mono-crystalline brackets.</li> </ul>
<b>STRENGTH</b>	<ul style="list-style-type: none"> <li>Generally stronger due to the single crystal structure, but they can be more brittle.</li> <li>They are less likely to fracture under normal use, but if they do, the break can be clean and sharp.</li> </ul>	<ul style="list-style-type: none"> <li>Slightly less strong than mono crystalline brackets but still very durable.</li> <li>They are less likely to chip or fracture under pressure.</li> </ul>
<b>COMFORT</b>	Both types are generally comfortable and effective for orthodontic treatment. However, the choice between them may depend on patient preference for aesthetics, and the orthodontist's recommendation.	

# BRILLIANCE™ SAPPHIRE BRACKET SYSTEM

## TRANSLUCENT MONO-CRYSTALLINE CERMAIC BRACKETS

- Rounded edge design enhances patient comfort.
- Brackets are made from a single-piece ceramic injection molding process.
- Designed with precise contours and edges for optimal adhesion to the teeth.
- The polished surface reduces friction between the brackets and the archwire.
- Unique mesh design ensures strong.
- Bonding and easy debonding.
- Precise vertical alignment guarantees optimal positioning.
- Translucent appearance offers superior aesthetics.

# PEARL-COMPACT™ SELF-LIGATING CERAMIC BRACKET SYSTEM

## TRANSLUCENT POLYCRYSTALLINE CERMAIC BRACKETS

- PEARL-COMPACT™ self-ligating brackets are advanced orthodontic devices that combine the aesthetic appeal of ceramic with the convenience and efficiency of self-ligating technology.

- The self-ligating mechanism reduces friction between the archwire and the bracket, potentially allowing for smoother and faster tooth movement.
- PEARL-COMPACT™ self-ligating brackets are designed to be smaller and more comfortable, while still providing effective treatment.

# METAL BRACKETS

- COMPACT-PASSIVETM METAL SELF LIGATING BRACKET SYSTEM
- COMPACT-ACTIVETM METAL SELF LIGATING BRACKET SYSTEM
- PRO-MASTERTM METAL BRACKET SYSTEM
- ALSAKATM METAL BRACKET SYSTEM

# METAL SELF-LIGATING BRACKETS

In its commitment to providing all possible solutions for its customers to ensure effective, fast, and safe orthodontic treatment, American Angle Orthodontics has always strived to offer the latest technologies in orthodontics, including Passive Self-Ligating Brackets and Active Self-Ligating Brackets. Both systems have advantages, and the choice often depends on the orthodontist's treatment goals and the patient's specific needs. Some orthodontists may also use a combination of both types depending on the stage of treatment. The key differences between metal passive and metal active self-ligating orthodontic brackets lie in how they interact with the archwire and affect tooth movement:

PROPERTIES	PASSIVE	ACTIVE
<b>MECHANISM OF WIRE ENGAGEMENT</b>	<ul style="list-style-type: none"> <li>• These have a clip or sliding door that does not press firmly against the archwire.</li> <li>• This allows the wire to move more freely within the bracket, reducing friction.</li> <li>• These brackets are typically used in the early stages of treatment when lighter forces are desired to allow for easier tooth movement.</li> </ul>	<ul style="list-style-type: none"> <li>• These have a clip or sliding door that actively presses against the archwire, increasing engagement and control over the wire.</li> <li>• This increased engagement is typically used to apply greater force to move teeth in a more controlled manner.</li> </ul>
<b>FRICTION</b>	<ul style="list-style-type: none"> <li>• Lower friction between the bracket and the archwire allows for easier and faster tooth movement with lighter forces, making them beneficial for initial alignment and leveling stages.</li> </ul>	<ul style="list-style-type: none"> <li>• These create higher friction between the bracket and the archwire, which can provide more control but may slow down tooth movement compared to passive systems.</li> </ul>
<b>FORCE APPLICATION</b>	<ul style="list-style-type: none"> <li>• As the archwire is allowed more freedom, the forces exerted are generally lighter, which can be gentler on teeth and surrounding tissues.</li> </ul>	<ul style="list-style-type: none"> <li>• The higher engagement leads to more force being applied to the teeth, which can be useful in stages of treatment where greater control over tooth movement is needed, such as space closure or fine-tuning.</li> </ul>
<b>CLINICAL USE</b>	<ul style="list-style-type: none"> <li>• Often preferred in the initial phases of treatment when tooth movement and leveling are prioritized.</li> </ul>	<ul style="list-style-type: none"> <li>• Typically used in the latter stages of treatment where more precise control of tooth movement is required.</li> </ul>

# COMPACT-PASSIVE™ SELF-LIGATING BRACKET SYSTEM

## STANDARD TORQUE WITH REMOVABLE HOOK

- **MATERIAL:** Made from high-quality stainless steel due to its strength, biocompatibility, and corrosion resistance.
- **OPTIMIZED TORQUE CONTROL:** The standard torque of COMPACT PASSIVE™ Self Ligating Bracket system prescription provides consistent control over tooth angulation and positioning, ensuring a balanced, natural smile and occlusion without over or under-compensating tooth torque
- **EFFICIENT TOOTH MOVEMENT:** The passive self-ligating design allows for less friction between the bracket and the archwire, promoting faster, more efficient tooth movement, especially in the early treatment stages.
- **PATIENT COMFORT:** The low-profile design of COMPACT PASSIVE™ reduces irritation to the patient's cheeks and lips. The passive nature of the system also ensures gentle, lighter forces, making the treatment more comfortable overall.
- **FLEXIBILITY WITH REMOVABLE HOOKS:** The detachable hooks offer added convenience during treatment, as they can be attached or removed based on the patient's treatment stage. They are especially useful when elastics or other auxiliary devices are needed temporarily.
- **IMPROVED ORAL HYGIENE:** Since COMPACT PASSIVE™ Self Ligating Brackets do not require elastomeric ties, there is less accumulation of plaque and food particles, making it easier for patients to maintain better oral hygiene throughout their orthodontic treatment.
- **AESTHETIC APPEARANCE:** Without the need for elastomeric ligatures, the brackets retain a cleaner appearance, avoiding the staining that can occur with traditional rubber ties.

# COMPACT-ACTIVE™ SELF-LIGATING BRACKET SYSTEM

COMPACT-ACTIVE™ self-ligating brackets provide an efficient and comfortable alternative to traditional braces:

- **MATERIAL:** Made from high-quality stainless steel due to its strength, biocompatibility, and corrosion resistance.
- **EFFICIENT TORQUE AND ROTATION CONTROL:** COMPACT-ACTIVE™ self-ligating brackets allow better torque and rotation control of teeth, which is beneficial for achieving precise alignment, especially in cases that involve complex tooth movement.
- **BUILT-IN CLIP OR SLIDE MECHANISM:** COMPACT-ACTIVE™ brackets have a built-in clip or slide that actively holds the archwire in place, allowing for controlled movement of teeth.
- **REDUCED FRICTION:** COMPACT-ACTIVE™ self-ligating brackets generate less friction between the archwire and the bracket compared to traditional ligature brackets.
- **IMPROVED PATIENT COMFORT:** COMPACT-ACTIVE™ self-ligating brackets reduce plaque accumulation and are easier to clean, improving oral hygiene. The design also minimizes discomfort, as adjustments are often quicker and involve less force than traditional braces.
- **ENHANCED CONTROL OVER TOOTH MOVEMENT:** The active mechanism provides greater control over tooth movement, as it securely holds the archwire in place.

# PRO-MASTER™ METAL BRACKET SYSTEM

## LOW PROFILE MINIATURE METAL INJECTION MOLDED BRACKET SYSTEM

- **MATERIAL:** Made from high-quality stainless steel, providing exceptional strength and durability throughout treatment.
- **LOW-PROFILE DESIGN:** Pro-Master™ brackets feature a miniature design that reduces bulk on teeth, minimizing irritation to soft tissues and enhancing patient comfort.
- **PRECISION ENGINEERING:** The MIM process ensures consistent manufacturing precision for reliable tooth movement and treatment outcomes.
- **ENHANCED HYGIENE:** Compact size allows for easier cleaning around brackets, promoting better oral hygiene during treatment.
- **CONTROL AND STABILITY:** Despite their reduced size, Pro-Master™ brackets maintain effective control over tooth movement with the same precision as standard brackets.
- **DURABILITY:** Manufactured from premium stainless steel, these brackets resist breakage and withstand treatment forces effectively.
- **BONDING STRENGTH:** Engineered for optimal adhesion to tooth surfaces, minimizing the risk of debonding despite their compact size.
- **IDENTIFICATION SYSTEM:** Features an innovative color-coding system and permanent identification markings for quick and easy bracket recognition.
- **TREATMENT VERSATILITY:** Compatible with various treatment approaches while maintaining the benefits of a low-profile design.
- **PATIENT COMFORT:** Miniature design significantly reduces interference with speech and daily activities.
- **SURFACE QUALITY:** Smooth, polished surfaces minimize friction and enhance treatment efficiency.
- **PROFESSIONAL EFFICIENCY:** Color-coding and permanent markings facilitate quick identification and placement for practitioners.

# ALASKA™ METAL INJECTION MOLDED BRACKET SYSTEM

- **MATERIAL:** Made from high-quality stainless steel due to its strength, biocompatibility, and corrosion resistance.
- **HIGH PRECISION:** The MIM process allows for extremely tight tolerances and precise detailing, which leads to brackets with highly accurate slot dimensions for consistent tooth movement.
- **STRENGTH AND DURABILITY:** ALASKA™ MIM brackets are known for their high tensile strength, resisting deformation under stress and ensuring long-term stability during treatment.
- **LOW-PROFILE DESIGN:** ALASKA™ brackets have a slim profile, reducing irritation to the soft tissues and improving patient comfort.
- **SMOOTH SURFACE:** The smooth surface of ALASKA™ brackets reduces friction between the bracket and the archwire, aiding in efficient tooth movement.
- **CORROSION RESISTANCE:** ALASKA™ stainless steel brackets are resistant to corrosion and tarnishing, ensuring durability over the course of treatment.
- **TORQUE AND ANGULATION:** Both MBT and Roth systems of ALASKA™ brackets have built-in torque and angulation features for each tooth, ensuring precise control over tooth movement.
- **BONDING:** ALASKA™ MIM brackets have 80-gauge mesh base, ensuring a strong bond with the tooth and a lower likelihood of bracket failure. The base of the bracket is contoured to fit the tooth's natural shape, improving comfort and bond strength.
- **Ball Hook Design:** For comfort and ease of use with inter-arch elastics.
- **PRECISION AND CONSISTENCY:** ALASKA™ MIM system ensures that each bracket is identical in terms of dimensions, resulting in consistent treatment outcomes.
- **PATIENT COMFORT:** The low-profile design, rounded edges, and smooth surface significantly enhance patient comfort, reducing irritation to the lips and cheeks.
- **COLOR-CODING:** ALASKA™ brackets are color-coded for easy identification during placement.

# BUCCAL TUBE

- SINGLE, NON-CONVERTIBLE
- DOUBLE, NON-CONVERTIBLE
- SELF LIGATING, NON-CONVERTIBLE

# AUSTIN™ ADVANCED MIM BUCCAL TUBE SYSTEM

## SINGLE, NON-CONVERTIBLE

AUSTIN™ Metal Injection Molding non-convertible orthodontic buccal tubes offer several advantages that make them the best choice in orthodontic treatments. Here are some of the key benefits :

- **HIGH PRECISION AND CONSISTENCY:** MIM technology of AUSTIN™ buccal tubes allows for the production of buccal tubes with very high precision and uniformity, ensuring consistency in size, shape, and function across all units. This results in better fitting and more predictable treatment outcomes .
- **DURABILITY AND STRENGTH:** AUSTIN™ MIM non-convertible buccal tubes are made from high-quality stainless steel, which offers excellent strength and durability. This makes them resistant to deformation and wear, ensuring they last throughout the orthodontic treatment without needing replacement.
- **SMOOTH SURFACE FINISH:** The MIM process results in a smooth surface finish, which is more comfortable for the patient. It reduces irritation to the soft tissues of the mouth, such as the cheeks and gums, improving the patient’s overall experience.
- **REDUCED FRICTION:** The precision design of AUSTIN™ MIM buccal tubes reduces friction between the tube and the archwire. This can enhance the efficiency of tooth movement, leading to faster and more comfortable treatment for the patient.
- **COMPACT AND LOW-PROFILE DESIGN:** This not only improves comfort but also enhances aesthetics by being less visible.
- **SECURE ARCHWIRE ENGAGEMENT:** AUSTIN™ buccal tubes are designed to provide secure and reliable archwire engagement. The tube holds the archwire firmly in place, reducing the risk of detachment or slippage, which can lead to more consistent and effective tooth movement.
- **NO NEED FOR CONVERSION:** Non-convertible AUSTIN™ buccal tubes eliminate the need for converting molar bands into buccal tubes during treatment, simplifying the orthodontist’s workflow and reducing chair time for the patient.

# AUSTIN™ ADVANCED MIM BUCCAL TUBE SYSTEM

## DOUBLE, NON-CONVERTIBLE

The advantages of having AUSTIN™ double buccal tubes include:

- **INCREASED FUNCTIONALITY:** The second tube provides an additional slot for auxiliary wires, elastics, or other appliances, allowing for more complex and precise tooth movements
- **IMPROVED CONTROL:** Double tubes offer more control over different phases of treatment, such as aligning, leveling, or finishing stages.
- **SEGMENTAL MECHANICS:** Allows the use of separate wires for different segments of the arch, improving control over torque and angulation.
- **VERSATILITY:** Can accommodate multiple treatments simultaneously (e.g., distalizing molars while maintaining arch stability with another wire.)
- **CONVENIENCE:** Reduces the need to change tubes or brackets during different phases of treatment, saving time and effort for orthodontists and patients.
- **ENHANCED ANCHORING:** The second tube provides additional anchorage, which is especially useful in complex cases requiring greater stability and force application.

# AUSTIN-COMPACT™ SELF LIGATING BUCCAL TUBE SYSTEM

BONDABLE, NON CONVERTIBLE

AUSTIN-COMPACT™ Self-ligating tubes eliminate the need for elastomeric ties, making it quicker and easier for orthodontists to insert or adjust archwires.

- The reduced friction in self-ligating systems allows for smoother and more efficient movement of the archwire, potentially shortening treatment duration.
- Our Self-ligating buccal tubes are designed with a low profile to minimize discomfort and prevent interference with normal oral functions.
- The absence of ligatures and the smooth design reduce plaque accumulation, improving oral hygiene during treatment.
- Bondable buccal tubes are securely attached to the tooth surface with adhesive, providing a strong and reliable bond.
- Our Self-ligating tubes systems reduce friction between the archwire and the tube, ensuring optimal force transmission and enabling lighter forces for tooth movement.
- These buccal tubes can be used in various orthodontic cases, including crowding, alignment, and molar control.

- The textured interior surface guarantees optimal bonding strength.
- The ideal hardness allows for effortless clinical use, while the anatomical contouring ensures easy placement and precise fit.
- The band's shape is designed to match the contour of the molar, utilizing computer simulation technology to ensure a close and precise fit with the tooth.
- The permanent laser marking offers straightforward identification, and the smooth surface with rolled edges provides maximum comfort for the patient.

## PRECISION ENGINEERED FOR OPTIMAL RESULTS

AAO's Cord™ line offers a comprehensive range of precision-engineered orthodontic wires and auxiliaries designed to deliver exceptional performance and reliable treatment outcomes. Each product in our portfolio combines advanced materials science with meticulous manufacturing processes to ensure consistent quality and optimal clinical results.

- **OUR COMPLETE RANGE INCLUDES:** Stainless Steel Archwires: Available in both standard and coated versions, these wires offer superior strength and durability. The coated variant features a smooth surface that reduces friction and enhances patient comfort while maintaining excellent control over tooth movement.
- **NITI ARCHWIRES:** Engineered with exceptional shape memory properties, these archwires provide consistent force delivery and superior flexibility, making them ideal for initial alignment stages and complex tooth movements.
- **BETA TITANIUM TMA ARCHWIRES:** Combining optimal strength with excellent formability, these high-performance wires offer enhanced control and precision for detailed finishing stages of treatment.
- **NICKEL TITANIUM SPRINGS:** Open Coil: Specifically designed for creating space and addressing crowding issues
- **CLOSED COIL SPRING:** Ideal for space closure and maintenance during treatment Both varieties deliver consistent force application and superior elasticity for efficient tooth movement.
- **AUXILIARY WIRES: LIGATURE WIRES:** Medical-grade stainless steel wires ensuring secure archwire engagement
- **KOBAYASHI WIRES:** Specialized ligature wires with integrated hooks for elastic attachment
- **MULTI-STRAND WIRES:** Three-twisted design offering enhanced flexibility and gentle forces Each Cord™ product is available in a comprehensive range of sizes and configurations to accommodate various clinical needs and treatment protocols. Our commitment to quality ensures that every wire delivers reliable performance, optimal force delivery, and enhanced patient comfort throughout the treatment journey.

# CORD™ NICKEL TITANIUM OPEN COIL SPRINGS

NITI OPEN COIL SPRINGS ARE OFTEN USED TO CREATE SPACE BETWEEN TEETH THAT ARE TOO CROWDED.

## BENEFITS:

### SPACE CREATION:

- Open coil springs exert gentle, continuous force to push adjacent teeth apart, creating space for proper alignment or the placement of other orthodontic components.

### EFFICIENT TOOTH MOVEMENT:

- They allow for more precise and controlled movement of teeth, improving the overall efficiency of the orthodontic treatment.

### VERSATILITY:

- Open coil springs can be used in various parts of the mouth, adapting to different treatment needs, such as spacing out molars, canines, or incisors.

### IMPROVED COMFORT:

- While providing necessary force, they are designed to minimize discomfort for the patient compared to more aggressive methods of tooth movement.

### REDUCED TREATMENT TIME:

- By efficiently creating space early on in treatment, they can help reduce overall treatment time, making the process faster and more predictable.
- These springs play an important role in resolving crowding issues, particularly in cases where teeth are blocked or trapped.

# CORD™ NICKEL TITANIUM CLOSED COIL SPRINGS

NITI CLOSED COIL SPRINGS ARE OFTEN USED TO BRING TEETH TOGETHER OR MAINTAIN SPACE IN THE TREATMENTS

## BENEFITS:

### CONSTANT FORCE OVER TIME:

- NiTi closed coil springs provide a consistent and continuous force, which helps maintain or close spaces between teeth without needing frequent adjustments, making them highly efficient in tooth movement.

### SUPERELASTICITY:

- Due to the unique properties of nickel-titanium, these springs can stretch and return to their original shape, even after significant deformation, offering more predictable and controlled tooth movement.

### CORROSION RESISTANCE:

- Nickel-titanium is highly resistant to corrosion, which is beneficial in the moist oral environment, ensuring long-lasting performance throughout treatment.

### REDUCED PATIENT DISCOMFORT:

- The gradual, continuous force applied by NiTi closed coil springs minimizes discomfort compared to other methods that require higher forces or more frequent adjustments.

### SPACE MAINTENANCE OR CLOSURE:

- They are ideal for closing gaps between teeth or maintaining space for unerupted or impacted teeth, ensuring the treatment plan progresses smoothly.

## CORD™ MULTI-STRAND WIRES (3 TWISTED)

- CORD™ stainless steel 3-twisted multi-strand wires are used in various stages of orthodontic treatment.
- These wires are made by twisting three individual stainless steel strands together, creating a flexible, durable wire that offers unique advantages in certain clinical applications.

- The CORD™ multi-strand design provides greater flexibility compared to single-strand wires, making them suitable for early stages of treatment when gentle, continuous forces are needed.
- This flexibility also allows for minor adjustments without compromising the wire's structure.

# CORD™ LIGATURE WIRES

- Orthodontic stainless steel ligature wires are essential components in traditional braces systems, used to secure the archwire within the brackets.

- CORD™ Stainless steel ligature wires are known for their high strength, which allows them to hold the archwire securely in place even under the forces exerted during orthodontic treatment.
- This strength ensures stability and durability throughout the treatment process.
- Made from medical-grade stainless steel, these ligature wires resist corrosion, which is essential for long-term use in the moist environment of the mouth.
- The corrosion resistance also maintains the wire's integrity and prevents any metallic taste or reactions.

250pcs/Tube

# CORD™ KOBAYASHI WIRES

- Kobayashi wires are specialized ligature wires with hooks that are used for additional functionality in braces systems. They provide extra anchorage points for elastics or other auxiliaries in orthodontic treatments.

- CORD™ Kobayashi wires are preformed ligature wires with a small, built-in hook, allowing orthodontists to attach elastics, rubber bands, or other auxiliaries easily. This feature is particularly useful for interarch elastic wear, providing patients with an anchor point on individual brackets.
- Made from high-quality stainless steel.
- CORD™ Kobayashi wires have excellent strength and durability, allowing them to withstand forces exerted by elastics and maintain their form without bending or breaking easily. This strength ensures they provide reliable support throughout treatment.

# AUX™ HELPERS & ACCESSORIES

American Angle provides a wide range of accessories and auxiliaries which are used as complimentary additions to brackets and wires.

## CRIMPABLE BALL HOOKS:

Crimpable hooks are a traction element added to the dental arch wire for the convenience of orthodontists during clinical operations without removing the arch wire and prefabricating the traction hook before installation.

<b>CRIMPABLE HOOK ROUND 0.021</b>	10pc/box	CBH1001
<b>CRIMPABLE HOOK RECTANGULAR 0.021*0.025</b>	10pc/box	CBH1002

## CURVED CRIMPABLE HOOKS LEFT & RIGHT

Curved Crimpable hooks are easily crimped onto archwire for precise placement in or outside of the mouth. Crimp tubes create a strong, non-sliding lock with the archwire and remain firmly-in-place during treatment. Ball hook may be bent for right or left applications.

<b>CURVED CRIMPABLE HOOKS LEFT &amp; RIGHT</b>	10pcs/box	CCH1001
--	-----------	---------

## SLIDING CRIMPABLE HOOKS LEFT & RIGHT

Fixed on dental archwire to prevent it from movement, it can be placed onto archwires inside or outside the mouth.

<b>SLIDING CRIMPABLE HOOKS LEFT &amp; RIGHT</b>	10pcs/box	CSC1001
---	-----------	---------

## 90 DEGREE BENDING CRIMPABLE HOOKS LEFT & RIGHT

Fixed on dental arch wire, more flexible than normal crimpable hooks & mainly used for elastic lined and modules.

<b>90 DEGREE BENDING CRIMPABLE HOOKS LEFT &amp; RIGHT</b>	10pcs/box	CDB1001
---	-----------	---------

## OPEN-WALL ARCH HOOKS LEFT & RIGHT

Open-Wall arch hooks provide solid anchor for elastics or springs.

<b>OPEN-WALL ARCH HOOKS LEFT &amp; RIGHT</b>	10pcs/box	COA1001
--	-----------	---------

## CRIMPABLE CROSS TUBES

Cross tubes are used mainly to easily attach individual elements to the main archwire .

<b>CRIMPABLE CROSS TUBES</b>	10pcs/box	CCT1001
------------------------------	-----------	---------

## CRIMPABLE DOUBLE TUBES

Cross tubes are fixed on the archwire to facilitate other attachments and accessories.

<b>CRIMPABLE DOUBLE TUBES</b>	10pcs/box	CDT1001
-------------------------------	-----------	---------

# AUX™ HELPERS & ACCESSORIES

## CRIMPABLE STOPS

Crimp securely on an archwire to act as a stop.  
Quick application to activate open coils.  
Fit round or rectangular wires.

<b>CRIMPABLE STOPS ROUND (0.021)</b>	10pcs/box	CCS1001
<b>CRIMPABLE STOPS ROUND (0.021*0.025)</b>	10pcs/box	CCS1002

## CRIMPABLE MINI STOPS

Fixed on dental archwire to prevent it from movement.

<b>CRIMPABLE MINI STOPS SMALL (5MM)</b>	10pcs/box	CMS1001
<b>CRIMPABLE MINI STOPS LARGE(8MM)</b>	10pcs/box	CMS1002

## LINGUAL BUTTONS

Lingual buttons are used to correct misalignments, malocclusions, and crooked teeth.  
Used as a fixing point for power chains, springs, and wires for traction and tooth movement.  
Attached directly onto the tooth using orthodontic resins and composites.  
Lingual buttons are divided into bondable and weldable types.

<b>LINGUAL BUTTONS ROUND BONDABLE</b>	10pcs/box	BRB1001
<b>LINGUAL BUTTONS ROUND WELDABLE</b>	10pcs/box	BRB1002

## LINGUAL BUTTONS WITH HOOK

Bondable Round Base with hollow-out.  
The special Base design of a hollow base for removing spare adhesive increases the bonding strength.

<b>LINGUAL BUTTONS ROUND BONDABLE WITH HOLLOW-OUT</b>	10pcs/box	BRH1001
---	-----------	---------

## LINGUAL BUTTONS (BONDABLE HOLE)

Bondable holes allow for precise placement, facilitating optimal treatment outcomes.  
With an 80-gauge mesh base, these buttons offer excellent bonding strength, ensuring secure attachment to the teeth.

<b>LINGUAL BUTTONS BONDABLE HOLE</b>	10pcs/box	LBH1001
--------------------------------------	-----------	---------

## LINGUAL BUTTONS WITH TRACTION HOOK

Can be directly bonded to a tooth surface, it accepts and retains elastics, elastic thread, and wires as applied from any direction.  
It comes in a round and rectangular shape.

<b>LINGUAL BUTTONS WITH TRACTION HOOK (ROUND)</b>	10pcs/box	BTH1001
<b>LINGUAL BUTTONS WITH TRACTION HOOK (RECTANGULAR)</b>	10pcs/box	BTH1002

# AUX™ HELPERS & ACCESSORIES

## LINGUAL DIRECT BOND EYELET

Can be directly bonded to a tooth surface, it comes in round and rectangular shape.

<b>LINGUAL DIRECT BOND EYELET (ROUND)</b>	10pcs/box	LDE1001
<b>LINGUAL DIRECT BOND EYELET (RECTANGULAR)</b>	10pcs/box	LDE1002

## LINGUAL GOLDEN EYELET WITH CHAIN

The potential for allergic reaction is minimized with a plating of 24-karat gold, which helps to limit the amount of nickel ions that can be released into the oral environment.

The traction chain swings freely within the eyelet.

It can be cut easily to achieve the desired length; the traction chain can be tied to the archwire with elastic thread or tubing to provide traction in the desired direction.

Bondable to cuspids impacted palatally or labially, Take control of impacted cuspids.

<b>LINGUAL GOLDEN EYELET WITH CHAIN (ROUND)</b>	5pcs/box	LGE1001
<b>LINGUAL GOLDEN EYELET WITH CHAIN (RECTANGULAR)</b>	5pcs/box	LGE1002

## LINGUAL SHEATH

Lingual Sheaths fit all tubes perfectly and securely, preventing unwanted movements during distalisation and mesialisation.

<b>LINGUAL SHEATH PRE-WELD</b>	10pcs/box	ALS1001
--------------------------------	-----------	---------

## LINGUAL SHEATH WITH HOOK LEFT & RIGHT

Lingual Sheath with Hook offers maximum patient comfort and ease of use.

<b>LINGUAL SHEATH WITH HOOK L&amp;R RECTANGULAR SMOOTH BASE</b>	10pcs/box	ALS1002
---	-----------	---------

## LINGUAL CLEATS

Lingual cleat has a low-profile design with smooth ball hooks easily adjusted for elastic replacement or other treatment purposes.

<b>LINGUAL CLEATS WELDABLE (SMALL)</b>	10pcs/box	LCS1001
<b>LINGUAL CLEATS WELDABLE (BIG)</b>	10pcs/box	LCB1001

## BITE OPENER

Bite Opener offers a seamless solution for achieving bite opening, as it can be conveniently bonded to the lingual surface of maxillary teeth.

<b>BITE OPENER BONDABLE</b>	10pcs/box	AOB1001
-----------------------------	-----------	---------

## TONGUE TAMERS

Tongue tamer is designed to stop tongue thrusting and thumb sucking easily and effectively.

Bonds perfectly to upper or lower arches due to the curved 80-gauge foil mesh bonding base.

<b>TONGUE TAMER BONDABLE</b>	10pcs/box	ATT1001
------------------------------	-----------	---------

# AUX™ HELPERS & ACCESSORIES

## PALATAL ARCH BARS

Palatal arch bars provide excellent control of upper first molars that require stabilization, rotation, torquing or expansion. Molars can be rotated to the buccal by compressing the palatal loop during insertion. Molar stability can be maintained by inserting passively.

# AUX™ CLASS II CARRIER MOTION 3D

- AUX™ Class II Carrier Motion 3D Appliance is used to address Class II malocclusions, where the upper teeth are positioned too far forward relative to the lower teeth.

- The appliance consists of two arms attached to the canine or first premolar and the first molar.
- By using an elastics system attached to a lower anchor, it creates a force to move the molars back while the premolars and canines are shifted slightly forward.
- This can often correct the bite without extractions it Reduces treatment time, simplifies complex cases, and avoids surgery or more invasive procedures.
- It also eliminates the need for headgear.

# MIRRORS

- AURORA™ STAINLESS STEEL MIRRORS

# AURORA™ STAINLESS STEEL MIRRORS

The AURORA Orthodontic Mirror Series represents the pinnacle of dental innovation, offering unparalleled performance and comfort. Here are the key features that set AURORA mirrors apart:

## EXCEPTIONAL CLARITY AND PRECISION:

- High-quality reflective surfaces provide crystal-clear images.
- Distortion-free viewing ensures accurate diagnoses and treatments.

## ERGONOMIC DESIGN:

- Comfortable grip reduces hand fatigue during extended use.
- Balanced weight distribution for optimal control and maneuverability.

## DURABLE CONSTRUCTION:

- Made from high-grade, corrosion-resistant materials.
- Built to withstand repeated sterilization cycles without degradation.

## ANTI-FOG TECHNOLOGY:

- Advanced coating prevents fogging, maintaining clear visibility throughout procedures.
- Reduces interruptions and improves efficiency during examinations.

## VERSATILE SIZES AND SHAPES:

- Range of options to suit different oral cavity areas and patient needs.
- Includes popular sizes like front surface, concave, and handle mirrors.

## ENHANCED PATIENT COMFORT:

- Smooth edges and contours minimize soft tissue irritation.
- Compact design allows for easy intraoral manipulation.

## EASY MAINTENANCE:

- Simple to clean and sterilize, promoting optimal hygiene standards.
- Resistant to staining and discoloration, preserving a professional appearance.

## OPTIMAL ILLUMINATION:

- Some models feature built-in LED lighting for improved visibility in hard-to-see areas.
- Reduces shadows and enhances detail perception during examinations.

## COMPATIBILITY WITH DIGITAL SYSTEMS:

- Select models designed to work seamlessly with intraoral cameras and imaging software.
- Facilitates comprehensive digital record-keeping and treatment planning.

By incorporating AURORA Orthodontic Mirrors into your practice, you'll experience enhanced visibility, improved efficiency, and greater patient satisfaction.

Choose AURORA – where excellence shines in every reflection!

## COMMITMENT TO CUSTOMER SATISFACTION

At American Angle Orthodontics, excellence in customer satisfaction drives everything we do. We recognize that occasionally our products may not align with your expectations. Should you receive a defective product or find its performance unsatisfactory, we offer you flexibility to choose between credit, exchange, or refund options. To ensure a smooth return process, please contact us before sending any items. Returns cannot be processed without prior authorization. For return arrangements, please contact our Customer Service Department at **+1 (929) 330-8791**.

- **SHIPPING AND HANDLING POLICIES**

Prices are F.O.B. shipping point, with applicable shipping, handling, and sales tax added to invoices.

- **PAYMENT TERMS**

The payment should be **100%** in advance. We accept payment via check, VISA, MasterCard, American Express, or Discover Card. All payments must be made to our U.S. headquarters in U.S. currency.

- **PRODUCT AND PRICING POLICIES**

American Angle Orthodontics maintains the right to enhance product design and quality, modify prices, and discontinue products without prior notification. For technique modifications, archwire size adjustments, or bracket/band preference changes, exchanges are permitted within one year of shipping if products are new, unopened, non-custom, and returned by the original purchaser.

- **WARRANTY TERMS**

American Angle Orthodontics' sole obligation and customer remedy for defective products is limited to merchandise replacement or purchase price refund, at our discretion. We explicitly disclaim all implied warranties, including merchantability or fitness for purposes. Contact us for an RMA number and send written defect claims to **8300 4TH AVENUES, 405, BROOKLYN, NY, 11209, USA**, within one year of delivery.

- **BAND AND BRACKET WARRANTY:**

Single patients use only warranty applies. Recycled bands or brackets void warranty coverage.

- **PRODUCT INSTRUCTIONS FOR USE**

For detailed product instructions and warranty policies, visit <https://americanangleortho.com/ifu>.

- **ORTHODONTIC INSTRUMENT WARRANTY RETURNS**

Defective pliers under warranty may be returned for repair or replacement at our discretion, provided they show no signs of misuse or tampering. Contact **+1 (929) 330-8791** for an RMA number before returning items. Ship authorized returns with visible RMA number and original documentation to **8300 4TH AVENUES, 405, BROOKLYN, NY, 11209, USA**. For routine maintenance and non-warranty repairs after six months of purchase, please contact: **8300 4TH AVENUES, 405, BROOKLYN, NY, 11209, USA**. Alternative service providers may be used. American Angle Orthodontics assumes no responsibility for third-party maintenance services.

- **WARNING**

Our products contain stainless steel and/or nickel titanium, which include nickel and chromium. Cobalt-chromium products contain chromium and trace nickel. These metals may cause allergic reactions in sensitive individuals. If allergic reactions occur, direct patients seek medical consultation.
